

ENVIRONMENTALLY FRIENDLY PACKAGING

Dri-Fresh® Supreme Absorbent Boards for presenting Fish and Meat

Dri-Fresh® Supreme absorbent boards combine excellent appearance and built-in absorbency to present chilled raw and cooked food in the best possible way. The boards are available in metallised gold and silver and a variety of absorbencies for any application. Excessive natural oils and juice inherent in the food are soaked up by the absorbent layer, but the food is

NOT drained of oil due to the unique valve type perforations in the barrier film. Ideal for smoked fish and meat as well as fresh chilled foods such as whole salmon sides and game, these boards are great for vacuum-packed foods.
